

Ministry of Education

## Area of Learning: APPLIED DESIGN, SKILLS, AND TECHNOLOGIES — Power Technology Grade 10

### BIG IDEAS

Mechanical service begins with operator safety.

Social, ethical, and sustainability considerations impact design.

Complex tasks require the sequencing of skills.

### Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to be able to do the following:</i></p> <p><b>Applied Design</b></p> <p><i>Understanding context</i></p> <ul style="list-style-type: none"><li>Engage in a period of <b>research</b> and <b>empathetic observation</b></li></ul> <p><i>Defining</i></p> <ul style="list-style-type: none"><li>Identify potential users and relevant contextual factors</li><li>Identify criteria for success, intended impact, and any <b>constraints</b></li><li>Determine whether activity is collaborative or self-directed</li></ul> <p><i>Ideating</i></p> <ul style="list-style-type: none"><li>Screen ideas against criteria and constraints</li><li>Critically analyze and prioritize competing <b>factors</b> to meet community needs for preferred futures</li><li>Maintain an open mind about potentially viable ideas</li></ul> <p><i>Prototyping</i></p> <ul style="list-style-type: none"><li>Evaluate a variety of materials for effective use and potential for reuse, recycling, and biodegradability</li><li>Make changes to tools, materials, and procedures as needed</li></ul>	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none"><li>internal and external combustion</li><li>components of a combustion engine</li><li>non-fuel power systems</li><li>disassembly and assembly sequences</li><li><b>engine terminology</b></li><li><b>lubrication and antifriction</b></li><li>hydraulic and pneumatic systems</li><li>transfer and conversion of energy</li><li>hand tools and power tools specific to mechanical repair and maintenance</li><li>torques and tolerances for specific operations</li><li>fasteners and fittings</li><li>energy transmission and <b>conversion systems</b></li><li>technologies that reduce energy use and waste</li><li>historical and potential future impact of energy, power, and transportation systems on society and the environment</li><li><b>alternate energy sources</b></li></ul>

## Learning Standards (continued)

Curricular Competencies	Content
<p><b>Testing</b></p> <ul style="list-style-type: none"><li>Identify <b>sources of feedback</b></li><li>Develop an <b>appropriate test</b></li><li>Conduct the test, collect and compile data, evaluate data, and decide on changes</li><li>Iterate the design idea</li></ul> <p><b>Making</b></p> <ul style="list-style-type: none"><li>Identify and use appropriate tools, <b>technologies</b>, materials, and processes</li><li>Make a step-by-step plan and carry it out, making changes as needed</li><li>Use materials in ways that minimize waste</li></ul> <p><b>Sharing</b></p> <ul style="list-style-type: none"><li>Decide on how and with whom to <b>share product</b> and processes</li><li>Demonstrate product to users and critically evaluate its success</li></ul> <p><b>Applied Skills</b></p> <ul style="list-style-type: none"><li>Demonstrate and document an awareness of precautionary and emergency safety procedures</li><li>Develop competency and proficiency in skills at various levels involving manual dexterity, mechanics, and maintenance</li><li>Identify the skills needed, individually or collaboratively, in relation to specific projects, and develop and refine them</li></ul> <p><b>Applied Technologies</b></p> <ul style="list-style-type: none"><li>Choose, adapt, and if necessary learn more about appropriate tools and technologies to use for tasks</li><li>Evaluate <b>impacts</b>, including unintended negative consequences, of choices made about technology use</li><li>Evaluate the influences of land, natural resources, and culture on the development and use of tools and technologies</li></ul>	

## APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Power Technology Grade 10

### Curricular Competencies – Elaborations

- **research:** may include traditional cultural knowledge and approaches of First Peoples and others, secondary sources, collective pools of knowledge in communities and collaborative atmospheres
- **empathetic observation:** may include experiences; traditional cultural knowledge and approaches of First Peoples and those of other cultures; places, including the land and its natural resources and analogous settings; people, including users, experts, and thought leaders
- **constraints:** limiting factors such as task or user requirements, materials, expense, environmental impact
- **factors:** including social, ethical, and sustainability
- **sources of feedback:** may include First Nations, Métis, or Inuit community experts; keepers of other traditional cultural knowledge and approaches; peers, users, and other experts
- **appropriate test:** consider conditions, number of trials
- **technologies:** tools that extend human capabilities
- **share:** may include showing to others or use by others
- **product:** for example, a physical product, process, system, service
- **impacts:** personal, social, and environmental

## APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Power Technology Grade 10

### Content – Elaborations

- **engine terminology:** relating to fundamentals of operation; classification and types
- **lubrication:** for example, oil, grease
- **antifriction:** for example, bearings, bushings
- **conversion systems:** for example, gear, sprocket, pulley, chain, cable
- **alternate energy sources:** for example, wind, solar, geothermal
