

BIG IDEAS

Design for the life cycle includes consideration of social and **environmental impacts**.

Design choices require the evaluation and refinement of skills.

Tools and technologies can be adapted for specific purposes.

Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to be able to do the following:</i></p> <p>Applied Design</p> <p><i>Understanding context</i></p> <ul style="list-style-type: none">Engage in a period of user-centered research and empathetic observationParticipate in reciprocal relationships throughout the design and production process <p><i>Defining</i></p> <ul style="list-style-type: none">Establish a point of view for a chosen design opportunityIdentify potential users, intended impact, and possible unintended negative consequencesMake decisions about premises and constraints that define the design and production <p><i>Ideating</i></p> <ul style="list-style-type: none">Generate ideas and add to others' ideas to create possibilities, and prioritize them for prototypingCritically analyze how competing social, ethical, and sustainability considerations impact design solutions to meet global needsWork with users throughout the design process <p><i>Prototyping</i></p> <ul style="list-style-type: none">Identify and apply sources of inspiration and informationChoose an appropriate form, scale, and level of detail for prototyping, and plan procedures for prototyping multiple ideas	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none">design and production opportunitiescolour output for image development in pre- and post-production environmentselements and principles of design as communication toolsdesign for the life cycleintellectual property use and its ethical, moral, and legal considerations, including cultural appropriationwork flow management through production processesconcept development to enhance or change the projectindustry standard technologiesethical sourcing of materials and implications and outcomes of their uselimitations of chosen materialshierarchy and delegation of roles in production team environmentsupply chain constraints

Curricular Competencies	Content
<ul style="list-style-type: none">Analyze the design for the life cycle and evaluate its impactsConstruct prototypes, making changes to tools, materials, and procedures as neededRecord iterations of prototyping <p>Testing</p> <ul style="list-style-type: none">Identify feedback most needed and possible sources of feedbackDevelop an appropriate test of the prototypeCollect feedback to critically evaluate design and make changes to design processes and productionIterate the prototype or abandon the design idea <p>Making</p> <ul style="list-style-type: none">Identify appropriate tools, technologies, materials, processes, and time needed for productionUse project management processes when working individually or collaboratively to coordinate production <p>Sharing</p> <ul style="list-style-type: none">Share progress while creating to increase feedback, collaboration, and, if applicable, marketingDecide on how and with whom to share or promote product, creativity, and, if applicable, intellectual propertyCritically reflect on their design thinking and processes, and identify new design goalsAssess ability to work effectively both as individuals and collaboratively while implementing project management processes <p>Applied Skills</p> <ul style="list-style-type: none">Apply safety procedures for themselves, co-workers, and users in both physical and digital environmentsIdentify and assess skills needed for design and production interests, and develop specific plans to learn or refine them over timeDevelop competency and proficiency in task-specific skills involving manual dexterity and software processes	<ul style="list-style-type: none">materials organization, sequencing, and quality control measuresfuture career options in production and manufacturinginterpersonal skills, including ways to interact with clientsfinancial planning, including economic impacts of productionappropriate use of technology, including digital citizenship, etiquette, and literacy

Ministry of Education

Area of Learning: APPLIED DESIGN, SKILLS, AND TECHNOLOGIES — Graphic Production Grade 12

Learning Standards (continued)

Curricular Competencies	Content
<p>Applied Technologies</p> <ul style="list-style-type: none">Explore existing, new, and emerging tools, technologies, and systems to evaluate suitability for their design and production interestsEvaluate impacts, including unintended negative consequences, of choices made about technology useAnalyze the role technologies play in societal changeExamine how cultural beliefs, values, and ethical positions affect the development and use of technologies	

APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Graphic Production Grade 12

Big Ideas – Elaborations

- **environmental impacts:** including manufacturing, packaging, disposal and recycling considerations

APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Graphic Production Grade 12

Curricular Competencies – Elaborations

- **user-centred research:** research done directly with potential users to understand how they do things and why, their physical and emotional needs, how they think about the world, and what is meaningful to them
- **empathetic observation:** may include experiences; traditional cultural knowledge and approaches; First Peoples worldviews, perspectives, knowledge, and practices; places, including the land and its natural resources and analogous settings; users, experts, and thought leaders
- **reciprocal relationships:** communicate with knowledge keepers for greater understanding of perspectives and history within the community, such as seniors, Elders, chiefs, First Nations tribal or band councils, and later career professionals
- **constraints:** limiting factors, such as available technology, expense, environmental impact, copyright
- **sources of inspiration:** may include aesthetic experiences; exploration of First Peoples perspectives and knowledge; the natural environment and places, including the land, its natural resources, and analogous settings; people, including users, experts, and thought leaders
- **information:** may include professionals; First Nations, Métis, or Inuit community experts; secondary sources; collective pools of knowledge in communities and collaborative atmospheres both online and offline
- **impacts:** including the social and environmental impacts of extraction and transportation of raw materials, manufacturing, packaging, transportation to markets, servicing or providing replacement parts, expected usable lifetime, and reuse or recycling of component materials
- **iterations:** repetitions of a process with the aim of approaching a desired result
- **sources of feedback:** may include peers; users; First Nations, Métis, or Inuit community experts; other experts and professionals both online and offline
- **appropriate test:** includes evaluating the degree of authenticity required for the setting of the test, deciding on an appropriate type and number of trials, and collecting and compiling data
- **project management processes:** setting goals, planning, organizing, constructing, monitoring, and leading during execution
- **Share:** may include showing to others, use by others, giving away, or marketing and selling
- **intellectual property:** creations of the intellect such as works of art, invention, discoveries, design ideas to which one has the legal rights of ownership; also consider how others might build upon the concept
- **technologies:** tools that extend human capabilities

Content – Elaborations

- **colour output:** for example, colour profiles, conversion from on-screen to print
- **elements:** for example, colour, form, line, shape, space, texture, tone, value
- **principles of design:** for example, balance, contrast, emphasis, harmony, movement, pattern, repetition, rhythm, unity
- **design for the life cycle:** taking into account in the design process, economic costs, and social and environmental impacts of the product, from the extraction of raw materials to eventual reuse or recycling of component materials
- **ethical, moral, and legal considerations:** for example, regulatory issues relating to responsibility for duplication, copyright, appropriation of imagery, sound, and video
- **cultural appropriation:** using or sharing a cultural motif, theme, “voice,” image, knowledge, story, song, or drama without permission or without appropriate context or in a way that may misrepresent the real experience of the people from whose culture it is drawn
- **work flow:** planning process for transforming ideas into creative work, either 2D or 3D
- **limitations:** for example, cost, availability, physical properties, product hazards
- **supply chain:** a system of people, activities, information, and resources involved in moving a product from supplier to consumer
- **sequencing:** the process of arranging, controlling, and optimizing work and workloads
- **interpersonal skills:** for example, people skills, social skills, communication, attitudes, collaboration, follow-ups, courtesies, record keeping
