

## BIG IDEAS

Complex roles and relationships contribute to **diversity of ecosystems**.

**Changing ecosystems** are maintained by natural processes.

Human practices affect the **sustainability of ecosystems**.

Humans can play a role in **stewardship and restoration** of ecosystems.

## Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to be able to do the following:</i></p> <p><b>Questioning and predicting</b></p> <ul style="list-style-type: none"> <li>Demonstrate a sustained intellectual curiosity about a scientific topic or problem of personal, local, or global interest</li> <li>Make observations aimed at identifying their own questions, including increasingly abstract ones, about the natural world</li> <li>Formulate multiple hypotheses and predict multiple outcomes</li> </ul> <p><b>Planning and conducting</b></p> <ul style="list-style-type: none"> <li>Collaboratively and individually plan, select, and use appropriate investigation methods, including field work and lab experiments, to collect reliable data (qualitative and quantitative)</li> <li>Assess risks and address ethical, cultural, and/or environmental issues associated with their proposed methods</li> <li>Use appropriate SI units and appropriate equipment, including digital technologies, to systematically and accurately collect and record data</li> <li>Apply the concepts of accuracy and precision to experimental procedures and data:           <ul style="list-style-type: none"> <li>significant figures</li> <li>uncertainty</li> <li>scientific notation</li> </ul> </li> </ul> <p><b>Processing and analyzing data and information</b></p> <ul style="list-style-type: none"> <li>Experience and interpret the local environment</li> </ul>	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none"> <li>abiotic characteristics:           <ul style="list-style-type: none"> <li><b>aquatic</b></li> <li><b>atmospheric</b></li> <li><b>edaphic</b></li> </ul> </li> <li><b>levels</b> of biotic diversity</li> <li>ecosystem complexity:           <ul style="list-style-type: none"> <li><b>roles</b></li> <li><b>relationships</b></li> <li><b>population dynamics</b></li> </ul> </li> <li><b>energy flow</b> through ecosystems</li> <li><b>matter cycles</b> through and between living systems</li> <li><b>succession</b></li> <li><b>First Peoples knowledge and other traditional ecological knowledge</b> in sustaining biodiversity</li> <li>benefits of <b>ecosystem services</b></li> <li><b>human actions</b> and their impact on ecosystem integrity</li> <li><b>First Peoples ways of knowing and doing</b></li> <li>resource <b>stewardship</b></li> <li><b>restoration practices</b></li> </ul>

## Learning Standards (continued)

Curricular Competencies	Content
<ul style="list-style-type: none"><li>• Apply First Peoples perspectives and knowledge, other ways of knowing, and local knowledge as sources of information</li><li>• Seek and analyze patterns, trends, and connections in data, including describing relationships between variables, performing calculations, and identifying inconsistencies</li><li>• Construct, analyze, and interpret graphs, models, and/or diagrams</li><li>• Use knowledge of scientific concepts to draw conclusions that are consistent with evidence</li><li>• Analyze cause-and-effect relationships</li></ul> <p><b>Evaluating</b></p> <ul style="list-style-type: none"><li>• Evaluate their methods and experimental conditions, including identifying sources of error or uncertainty, confounding variables, and possible alternative explanations and conclusions</li><li>• Describe specific ways to improve their investigation methods and the quality of their data</li><li>• Evaluate the validity and limitations of a model or analogy in relation to the phenomenon modelled</li><li>• Demonstrate an awareness of assumptions, question information given, and identify bias in their own work and in primary and secondary sources</li><li>• Consider the changes in knowledge over time as tools and technologies have developed</li><li>• Connect scientific explorations to careers in science</li><li>• Exercise a healthy, informed skepticism and use scientific knowledge and findings to form their own investigations to evaluate claims in primary and secondary sources</li><li>• Consider social, ethical, and environmental implications of the findings from their own and others' investigations</li><li>• Critically analyze the validity of information in primary and secondary sources and evaluate the approaches used to solve problems</li><li>• Assess risks in the context of personal safety and social responsibility</li></ul>	

## Learning Standards (continued)

Curricular Competencies	Content
<p><b>Applying and innovating</b></p> <ul style="list-style-type: none"><li>Contribute to care for self, others, community, and world through individual or collaborative approaches</li><li>Co-operatively design projects with local and/or global connections and applications</li><li>Contribute to finding solutions to problems at a local and/or global level through inquiry</li><li>Implement multiple strategies to solve problems in real-life, applied, and conceptual situations</li><li>Consider the role of scientists in innovation</li></ul> <p><b>Communicating</b></p> <ul style="list-style-type: none"><li>Formulate physical or mental theoretical models to describe a phenomenon</li><li>Communicate scientific ideas and information, and perhaps a suggested course of action, for a specific purpose and audience, constructing evidence-based arguments and using appropriate scientific language, conventions, and representations</li><li>Express and reflect on a variety of experiences, perspectives, and worldviews through <b>place</b></li></ul>
